

1943

Warren S. McCulloch and **Walter Pitts** tried to understand how the brain could produce highly complex patterns by using many basic cells that are connected together.

Warren S. McCulloch and **Walter Pitts** tried to understand how the brain could produce highly complex patterns by using many basic cells that are connected together.

1943

1950

1950

Alan Turing predicted the impact of Machine Learning. Additionally, he crafted what has been dubbed - The Turing Test.

1957

Frank Rosenblatt declared that he construct a system which works similar to the perceptual processes of a biological brain - The Perceptron.

1943

Warren S. McCulloch and **Walter Pitts** tried to understand how the brain could produce highly complex patterns by using many basic cells that are connected together.

1960

Henry J. Kelley published "Gradient Theory of Optimal Flight Paths". Many of his ideas were used to develop the basics of a continuous backpropagation model (aka the backward propagation of errors) used in training neural networks.

1950

Alan Turing predicted the impact of Machine Learning. Additionally, he crafted what has been dubbed - The Turing Test.

1957

Frank Rosenblatt declared that he construct a system which works similar to the perceptual processes of a biological brain - The Perceptron.

1965

Alexey Ivakhnenko and **V. G. Lapa** created the first *working* deep learning networks, applying what had been only theories and ideas up to that point.

Ivakhnenko developed a learning algorithm using deep feedforward multilayer perceptrons. For that reason alone, many consider Ivakhnenko the father of modern deep learning.
